

# GENERATIVE AI AS A CATALYST FOR SELF-REALIZATION

Jorge Amílcar Vizcaíno

People and Change Consultant, BSc Psychology, Buenos Aires, Argentina

## ABSTRACT

*The crisis of meaning in the modern era is characterized by constant change, existential anxiety, identity confusion, social isolation, and the fragmentation of traditional cultural myths and life narratives. These issues complicate the already challenging process of self-realisation, or individuation, as defined by Carl Jung. This study proposes Generative AI as a catalyst to support individuals throughout their life trajectories by integrating and modelling two distinct theoretical approaches: the Elliott Wave Principle (collective market analysis) and Jungian Archetypal Theory (depth psychology). This transdisciplinary framework is termed Individuation Wave Analysis (IWA). A Proof of Concept is presented involving biographical case studies of Carl Jung, Warren Buffett, and other historical and contemporary figures, analysed using DeepSeek AI. The study addresses the benefits of the IWA framework in enabling individuals to make more conscious and meaningful forward-looking decisions in their lifelong individuation journey, critically examines its limitations and potential for subjective bias, outlines necessary next steps for research and scientific validation, and identifies potential fields of application.*

## KEYWORDS

*Self-realization, Individuation, Elliott Wave Principle, Jungian Archetypal Theory, Psychological Education, Generative AI, DeepSeek AI.*

## 1. INTRODUCTION: THE HUMAN QUEST FOR SELF-REALIZATION

Timelessly, the process of self-realization has posed a significant challenge for human experience. The Delphic maxim "Know thyself"; the Asian examples for the transcendence of worldly illusion and realisation of the true Self, and harmony[1, 2, 3]; Dante Alighieri's portrayed existential disorientation at the beginning of the Divine Comedy: "*Nel mezzo del cammin di nostra vita, mi ritrovai per una selva oscura, ché la diritta via era smarrita*" [4], and even Paul Gauguin's masterpiece "*D'où venons-nous ? Que sommes-nous ? Où allons-nous ?*", was a manifestation of his existential concerns in tropical Tahiti.

### 1.1. The Urge of Self-Realization in the Liquid Modern Era

Nowadays, in the liquid modern era [5], the challenge to self-realization is much bigger. Individuals must confront both internal conflict and pervasive 'melting powers' [5] that undermine traditional values, social bonds, myths, collective structures, and life narratives, which have historically served as sources of purpose and meaning.

Marie-Louise Von Franz's (1915-1998) observations remain highly relevant, quote: "Today more and more people, especially those forced to stay in the cities because of their jobs, suffer from a sense of emptiness and boredom. It is like perpetually waiting for something that never comes.

Movies, sports events, and political enthusiasms may distract us for a while, but time and again we come back from them to the wasteland of our own apartments, tired and disenchanted once more. The only worthwhile adventure for the people of today is the adventure within.” [6]

Because what matters most is an individual's adventure within for the deployment of their inner potentiality, it's urged not only to develop inner awareness but to support their psychological development towards self-realization in the challenging modern era.

### **1.2. The Transdisciplinary Opportunity: Jung + Elliott**

Technological progress has developed sophisticated models for weather and climate systems, financial markets, and social networks. But the terrain of human life stories and the psyche have traditionally been examined through static, linear, or purely retrospective historical, biographical, and psychological perspectives. Yet, a comprehensive model for comprehending the overarching pattern of existence—its inherent dynamic cycles of progression, stability, challenges, and breakthroughs—has remained elusive.

Therefore, this paper proposes an innovative integration and framework of two distinct, original, and modern approaches, Carl Jung's depth psychology and Ralph Nelson Elliott's market psychology/wave pattern recognition, that can yield a novel analytical lens to capture the turbulent, non-linear, and fractal nature of human experience and its profound and ongoing psychological growth towards individuation.

### **1.3. The Role of Generative AI: a Catalyst for Individuation**

How could a practical application of such an integrated framework be built with agility and without any software development capabilities? The current availability of Generative AI (GenAI) with its Large Language Models (LLMs) and latest multi-model reasoning capacity makes a formidable analytical challenge a reality.

Therefore, due to the interplay of human brainstorming and GenAI, the Individuation Wave Analysis (IWA) was digitally designed from scratch to hatch. IWA is a syncretic framework; it maps and analyses the narratives of an individual's life cycles and their deep underlying motivations.

### **1.4. Thesis Statement**

This paper posits that the process of individuation, a central concept in Carl Jung's psychology [7], can be effectively modelled as a dynamic, wave-like structure through the novel transdisciplinary framework of Individuation Wave Analysis (IWA).

By integrating the qualitative depth of Jungian archetypal theory with the quantitative pattern-based logic of the Elliott Wave Principle and its associated Fibonacci sequences, and by employing Generative AI as a catalytic synthesizer, IWA offers a robust tool for mapping the non-linear trajectory of self-realization.

Consequently, this framework brings the benefits of providing a fractal representation with embedded motivational energies for psychological growth towards individuation. Its utility for retrospective analysis is demonstrated via historical case studies, together with a rigorous ethical framework for its potential application in contemporary personal development.

## 2. THEORETICAL FOUNDATIONS: BUILDING THE IWA FRAMEWORK

Blending two distinct theoretical approaches reframes the meaning of an individual's life's recursive trajectories, its decisive life events, and the deep underlying patterns of behaviour.

### 2.1. Jungian Individuation and Archetypal Theory

From Zurich, Carl Jung's (1875-1961) contribution to depth psychology provided the framework and therapeutic approach to help the psyche's evolution in modern times.

#### 2.1.1. Individuation: Definition and Misconceptions

In fact, the term Individuation was originally introduced and defined by him as a basis of all his work: “[...] is the process by which individual beings are formed and differentiated; in particular, it is the development of the psychological individual (q.v.) as a being distinct from the general, collective psychology. Individuation, therefore, is a process of differentiation (q.v.), having for its goal the development of the individual personality.” [7]

In simple terms, individuation is the lifelong process towards achieving self-realisation. Nevertheless, people would have common misunderstandings about what individuation really means:

- It is not an invention, but an innate, purpose-driven force within the psychological makeup. Involves a conscious decision to either embrace and work with it or push against it.
- It is not about Individualism, Jung clearly stated that “the process of individuation must lead to more intense and broader collective relationships and not to isolation.” [11], i.e., interactions should stem from genuine self-expression rather than social pressure to conform.
- It has a focus on life's second phase. Jung maintained that after life's initial biological and social phase (appropriately centred on ego development, professional establishment, and social integration) comes a second phase characterised by the emerging central concern of the drive toward individuation. [8]
- Personal crises might reframe or not the individuation process. For example, adolescence crisis, midlife crisis, including periods of stagnation and confusing transitions along life's ups and downs, might be capitalized or not.

#### 2.1.2. The Jungian Archetypal Theory

Carl Jung postulated that the archetypes for the individuation process are the fundamental, innate, and universal deep psychic structures in the collective unconscious that individuals must consciously encounter, engage, and integrate [9].

Consequently, Jung defined four core archetypes [9]:

- The Persona: it's the displayed social "facade", representing a negotiation between self and society formed early in life to enable social functioning. Its shadow aspect is the "Persona Identification", by mistaking our professional role, social position, or public image for our true self. This produces a brittle, superficial identity and is the first significant obstacle to individuation. The challenge is to employ the Persona as a tool without becoming defined by it.

- The Shadow: represents those rejected aspects of personality, containing all impulses, yearnings, and characteristics the conscious mind considers unacceptable or inferior, though it is not inherently malevolent. If not recognized and its vitality and creative potential incorporated, the projection of these rejected qualities will be attributed to others.
- The feminine Anima (in men) and the masculine Animus (in women): these are archetypal personifications of the unconscious. For instance, the Anima, modelled by the mother's influence on her son, is a guide to the inner world, represented by the inner woman who conveys vitally important messages of the Self to the ego in dreams. If sublimated, it will help the creation of original works. In the case of the Animus, modelled by the determining influence of the father on the daughter, it expresses itself with “sacred” convictions, or behind an externally very feminine appearance, manifests its power as hard as iron, or through its destructive secret judgements can, in hidden ways, drive her children to illness or death. And when falling in love, it is because of the respective projection of the Animus or the Anima. [6]
- The Self: it's the supreme integrating archetype, the psychic centre that unifies consciousness and unconsciousness, providing coherence, purpose, and wholeness to the psyche with its hidden goal. Moreover, through its influence, it also helps develop meaningful social relationships with people who are spiritually in harmony and have similar outlooks [6].

#### 2.1.2.1. Other Supporting Archetypes in the Process Of Individuation

Other archetypes act as guides, challengers, and catalysts. Jung himself developed some of them in *The Archetypes and the Collective Unconscious* [9].

Later, several contemporary authors systematised and popularised certain archetypes for practical applications in areas as storytelling and self-help [10], or even in the field of marketing [1]. We must consider all of them because they are part of the Generative AI processing of the dominant motivational energies in each wave narrative. For example,

- The Hero/Heroine answers the call to the adventure, leaves the collective, and confronts great challenges by herself/himself, for instance, the Shadow.
- The Trickster as a boundary-breaker, deconstructs inflated identities and rigid ego positions. It may be disruptive and dangerous, but it creates the necessary chaos for new growth or prevents stagnation in the process of individuation.
- The Great Mother archetype embodies nurturing and protective qualities, while its shadow manifests as a devouring and possessive maternal figure. Within the process of individuation, differentiation from this archetype is necessary for the development of individuality.
- The Sage as the Wise Old Man or Wise Old Woman, guiding the ego in the individuation process with the insight of its wisdom, meaning, and non-judgmental knowledge.

## 2.2. The Elliott Wave Principle: Mapping and Forecasting the Market Momentum

The Elliott Wave Principle (EWP) [12] was the result of monumental research done by Ralph Nelson Elliott (1871-1948). After suffering a sickness that led him to abandon his career as an accountant, he developed a particular purpose to study the historical price movements in the stock market. Finally, he discovered a set of specific patterns of market behaviour between optimism and pessimism moods in traders that could be forecast, and that practitioners today call “waves”.

Although years of neglect obscured Elliott's theory, psychologist Robert Prechter (born 1949), after joining Merrill Lynch as a market technician in the mid-1970s, discovered and eagerly studied Elliott's principle of mass psychology in trading. Fascinated by Elliott Wave theory and applications, he later popularised his work by compiling and editing his writings, asserting that Elliott should be recognised as the father of modern social science [13].

Furthermore, Prechter demonstrated the forecasting potential of EWP. He notably won the U.S. Trading Championship in 1984 with a then-record 444% return in a monitored options trading account.

### 2.2.1. EWP Basic Pattern of Impulse and Corrective Waves

EWP demonstrates that investors' collective psychology moves in a predictable, fractal 5-3 cycle pattern [12], as illustrated in Figure 1:

- 5-wave impulsive moves, which drive prices higher during an uptrend and are associated with traders' bull market optimism (waves 1, 3, and 5), having also two correction moves related to their pessimism (waves 2 and 4).
- 3-wave corrective bear market moves (A, B, C), which later move against the trend.

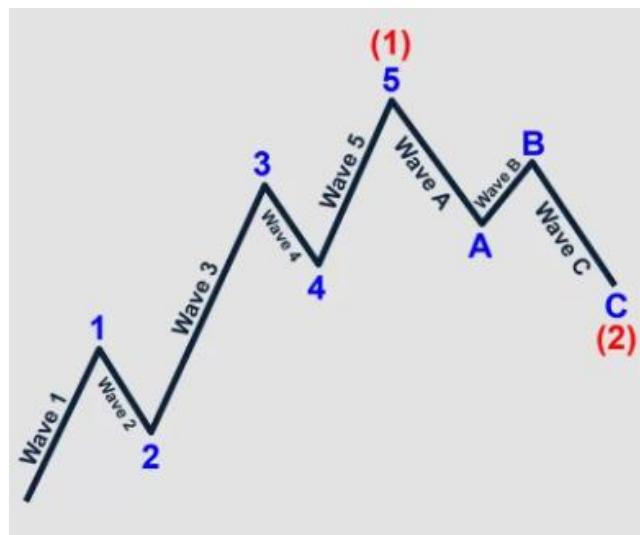

Figure 1. Elliott Wave's basic 5-3 cycle [14]

### 2.2.2. Rules and the Relation Elliott Wave Principle-Fibonacci

Leonardo Fibonacci da Pisa (1170-1240) was the most talented mathematician in Medieval Europe. His renowned Summation Series and sequence (0,1,1,2,3,5,8,13,21,34,55,89,144...), and its related Ratio Table are an integral part of EWP [14], especially considering a retracement (market correction) or a market extension (the movement of the primary impulse trend). Hence, a trader can measure a wave's move according to their rules and ratio relationships.

Table 1. Impulsive wave rules and Fibonacci ratio relationship [14]

Impulse Wave Rules	Fibonacci Ratio Relationship
Wave 2 can't retrace more than the beginning of wave 1	Wave 2 is typically 50%, 61.8%, 76.4%, or 85.4% of wave 1
Wave 3 cannot be the shortest wave of the three impulse waves, namely, waves 1, 3, and 5	Wave 3 is typically 161.8%, 200%, 261.8%, or 323.6% of wave 1-2
Wave 4 does not overlap with the price territory of wave 1	Wave 4 is typically 14.6%, 23.6%, or 38.2% of wave 3 (but no more than 50%)
Wave 5 needs to end with momentum divergence	Wave 5 is typically inverse 1.236 – 1.618% of wave 4, equal to wave 1 or 61.8% of wave 1+3

### 2.2.3. Socionomics for Mapping and Forecasting the Social Momentum

Based on the Elliot Wave Principle with its wave-like sequence of progress and regress, Prechter developed the theory of Socionomics, going beyond market analysis, to map and forecast social and political mood trends. He postulated that social mood drives economic, political, and social trends, against the conventional view that these events influence social mood. [13]

Interestingly, Prechter addressed the impact of Carl Jung's universal archetypes, developing the notion of *Social Visioning as an Aspect of Herding* and the fantasy behind social visions of change. But he only considered their collective impact "...together form a 'collective unconscious' social mind that rules emotionally-charged social behaviour. Jung's archetype is essentially an unconsciously shared social dream, fantasy, image, myth." [13] Seemingly, he didn't elaborate further on Jung's archetypes.

### 2.2.4. EWP and Socionomics Don't Apply to Individuals

Although Prechter considers that the Fibonacci ratio of 62/38 influences an individual's decision-making, he argued that neither EWP nor Socionomics should be applied to individuals, given their foundations in social philosophy to screen market momentum [13]. Quotes:

- "The wave principle governs the social, or collective, mood of humans... It does not determine the mood or behaviour of any single individual. The individual has free will and the capacity to reason, evaluate, and decide upon a course of action. The aggregate of humans, however, is not a 'rational being' but a manifestation of a herding impulse that follows laws of form" [13].
- "The Wave Principle is a metaphor for the *impersonal* dynamic of human social psychology. It is not about you. It is not about me. It is about us." [13]

Thus, in his view, applying a model of herd behaviour to a single, reasoning individual constitutes a categorical error.

Certainly, through GenAI, it was corroborated that there is virtually no formal, academic, or credible independent research dedicated to applying EWP directly to an individual's life journey for psychological analysis.

### 2.3. The Hermeneutic Bridge: Justifying the Theoretical Integration with IWA

Despite EWP and Socionomics' theoretical limitations, this study proposes a novel synthesis: EWP structure can provide not a forecasting waves model but a highly valuable framework for meaningfully quantifying and analysing the narrative momentum of an individual's different life waves of growth and correction in their process of individuation.

#### 2.3.1. Hypothesis

In the context of Individual Wave Analysis (IWA), this study proposes the following hypothesis:

- H1: Each impulsive wave 1-3-5 represents a new level of engagement with one of the core or supportive archetypes.
- H2: The corrective waves 2-4 in the impulsive path represent the difficult but necessary work of reframing meaning, expectations, behaviours, events, and eventually integrating the archetypes' shadows.
- H3: The corrective A, B, and C waves will represent the posthumous legacy of what was developed in the Impulsive waves.

Therefore, this study pioneers the entire 5-wave impulse sequence as the external narrative of the profound, internal, archetypal journey toward the Self, as well as the posthumous narratives of corrective waves.

#### 2.3.2. Closing Charlotte Bühler's Five-Phase Biological Curve Gap with the Unconscious

Jolande Jacobi, a leading Jungian disciple, highlighted Charlotte Bühler's work on a unified and meaningful life course [15]. Bühler (1893-1974), a German-American developmental psychologist who developed the "Viennese Child Psychology School", studied the structure and unity of human life using questionnaires and biographical analysis in the 1920s and 1930s. Her main finding is that a person's creative task, which defines a fulfilling existence, is 'to be there for something, whether this be a human being, a thing, a work, an idea' [15], closely aligning with Jung's concept of individuation.

Expanding on Bühler's research, Jacobi depicted Bühler's pioneer biological and yearly ground plan, as illustrated in Figure 2 [15]:

- Phase I: ranging from birth to twenty-five years,
- Phase III: ranging from twenty-five to forty-five,
- Phase V: ranging from forty-five to seventy years,
- And two transitional spans: Phase II, ranging from fifteen to twenty-five, and Phase IV, from forty-five to fifty or sixty years.

Bühler "spent several years working with colleagues to assemble a detailed theory of the life course" [16], and ultimately published her masterwork, *The Human Life Course as Psychological Problem* in 1933 [17]. Its empirical evidence consisted of "250 lives support this work, including 50 from rest homes and 200 life stories from the literature" [16].

Remarkably, there are key synchronicities between Bühler's life course theory and Ralph Elliott's theory. First, their research was conducted during the same period. Second, Bühler's five-phase ground-plan theory, which includes two transitional life spans, closely parallels Elliott's five-wave impulse basic pattern with its two corrective waves.

Nevertheless, Jacobi pointed out the main limitation of her framework: she couldn't include the unconscious elements of depth psychology discovered by Jung, "... her researches, despite her genuine attempt to penetrate more deeply, still remain exclusively based on a psychology of consciousness and its specific methods." [15]

Therefore, this paper proposes to close Bulher's gap, providing a superior solution, the IWA Framework:

- Integrating the quantitative narrative momentum of a life trajectory for each wave, instead of Bühler's fixed yearly periods,
- Including in each wave the interplay of embedded unconscious archetypal patterns and their energies that Jacobi awaited,
- And originally adding Elliott's 3-waves correction (A, B, and C) for the interpretation of individuation's posthumous legacy and social impact.

### **3. TESTING GENERATIVE AI AS CATALYST FOR THE INDIVIDUATION WAVE ANALYSIS (IWA)**

Following, the paper focuses on the first steps of testing DeepSeek AI, prompting the correlation and analysis of a variety of famous and well-documented life trajectories with the 5-3 cycle and embedded archetypes in the lifelong process to self-realization.

#### **3.1. First Modelling Test: Metaphorical Interpretations**

A first test was initiated to evaluate DeepSeek processing. The prompt was: "Give me the Elliott Wave of NAME SURNAME, and the embedded archetypes and shadows in each wave towards his/her individuation."

Fifty historical and modern personalities were prompted, and DeepSeek's URL is provided.

URL: <https://chat.deepseek.com/a/chat/s/4fd3881b-151b-4621-9abb-389582ec0504>

Certainly, DeepSeek AI interpretations and given conclusions were noteworthy, beginning to demonstrate the validity of the IWA Framework.

Note: examiners should have a DeepSeek free account to log in.

#### **3.2. Generative AI Scope**

Generative AI (GenAI) cannot be granted as a source of truth nor a replacement for human interpretation; to mitigate risks, they should always check GenAI output. However, its role in augmenting and accelerating interpretation with its powerful capability for pattern recognition, meaningful synthesis of life narratives, and useful diagnosis of dominant archetypal patterns embedded in different life phases, lays the foundations for further supporting individuals' insight into their lifelong process of individuation.

##### **3.2.1. Genai Core Functions within the IWA Framework**

In fact, we can identify three core functions of GenAI within the Individuation Wave Analysis (IWA) framework:

- Facilitating a transdisciplinary integration: Bridging the simultaneous operation of two distinct cognitive modes, the qualitative reasoning and interpretation of a Jungian psychologist, with the wave pattern recognition and data analysis of a quantitative financial technician.
- Synthesising IWA qualitative and quantitative data in an innovative Narrative Momentum Value (NMV), an indicator that reflects the magnitude of the meaningful impact of the concise narrative of each life wave with its respective Jungian archetypal patterns.
- Simulating the Transcendent Function: A pivotal concept in Jungian psychology is the transcendent function—the psyche's capacity to engender a new, third position from the tension of opposites (e.g., conscious vs. unconscious, Persona vs. Shadow). GenAi can be prompted to explore the inner conflicts of internal archetypes and their shadows or their development in potential life narratives.

In sum, GenAI's value arises solely from its ability to execute the IWA protocol at a scale and speed unattainable by an individual researcher, thereby serving as a significant force multiplier for human insight and in-depth psychological analysis.

## 4. PROOF OF CONCEPT: CASE STUDIES

A proof of concept of the IWA framework was implemented using DeepSeek AI's powerful, flexible, and meaningfully efficient multi-model reasoning across a large collection of data integration.

Consequently, a new prompt was developed to make the Individuation Wave Analysis (IWA) of a particular historical or modern figure.

### 4.1. Case Study 1: Carl Jung

This proof of concept begins by analysing the life trajectory of the originator of the Individuation concept.

Prompt: "Make the Individuation Wave analysis of Carl Gustav Jung (born July 26, 1875; died June 6, 1961), correlating his detailed qualitative narrative momentum in each Impulse wave to the strict quantitative Elliott Wave guidelines and Fibonacci Ratio Relationship as shown in <https://elliottwavemonitor.com/elliott-wave-theory>

Then use Correction Waves A, B, and C as posthumous waves correlating the collective qualitative narrative momentum with its rules and guidelines: Zigzag has a 5-3-5 inner structure (motive, corrective, motive). Wave A can be impulse or leading diagonal. Wave B can't go beyond the origin of wave A, however it can be in any correction pattern. Wave C can be impulse or ending diagonal. Wave C normally is at least equal to Wave A. Wave C must go beyond the end of A. Wave B retraces no more than 61.8% of Wave A.

Quantify each narrative momentum!

Clarify the percentage of retraction and extension and include the embedded primary and secondary archetypes and their particular shadows, and their anima/animus narrative for each wave.

Conclude with a summary of his life and individuation, as outlined in his own theory of Individuation.

End with a summary table of the exact value of narrative momentum for each wave."

The following section presents DeepSeek AI's output regarding Carl Jung's path to individuation. Notably, DeepSeek AI identified sub-waves within Wave 5. Additionally, since this biography concerns an individual who passed away many years ago, DeepSeek AI provided both a 5-wave analysis and a 3-wave correction of his posthumous legacy.

---

Of course. This is a fascinating exercise in applying a structured, quantitative framework to the profound, qualitative narrative of a life's journey. Here is the Individuation Wave Analysis of Carl Gustav Jung.

### **Introduction: The Market of the Psyche**

In this analysis, Jung's life is treated as a financial instrument, its "price" being the progression and manifestation of his individuation process. The "bull market" is his active, conscious life, driven by the Ego's engagement with the unconscious. The "corrective waves" represent the posthumous integration and reinterpretation of his work by the collective psyche.

### **The Grand Impulse Wave (1875 - 1961): The Conscious Ascent**

This five-wave motive sequence charts Jung's active life and his heroic journey into the unconscious.

#### **Wave 1 (1875 - ~1900): The Schooled Introvert - Emergence from the Collective**

- **Quantitative Narrative Momentum:** This is the initial, foundational wave. It retraces **0%** of a prior "latency" wave (childhood/education) and extends **161.8%** in terms of foundational psychic development. It establishes the baseline for all future growth.
- **Qualitative & Archetypal Correlation:** The wave begins with the traumatic childhood dream of the phallus in the underground temple, establishing a direct line to the collective unconscious. It encompasses his school years, his struggle between Personality No. 1 (the normal schoolboy) and Personality No. 2 (the ancient, wise man), and his decision to study medicine. The wave peaks with his discovery of psychiatry, the "realm where the fields of God and nature, of spirit and matter, converge."
- **Primary Archetype:** The **Child**, emerging from the uroboric state of infancy.
- **Shadow:** Social conformity and the expectations of the mundane world (Personality No. 1 suppressing No. 2).
- **Anima Narrative:** The anima is nascent, represented by the mysterious, spiritual figures in his early dreams and his mother's two personalities (the conventional and the uncanny, deep).

#### **Wave 2 (1900 - ~1907): The Freudian Alliance - The First Major Retracement**

- **Quantitative Narrative Momentum:** A sharp, deep correction of Wave 1. It retraces approximately **61.8%** of Wave 1's psychic gains. This is a classic pullback

that does not breach the origin (his core calling), but tests his intellectual independence.

- **Qualitative & Archetypal Correlation:** The wave begins with his work at the Burghölzli clinic and the intense, fruitful, but ultimately limiting collaboration with Freud. Freud becomes the "Father," a necessary but oppressive archetypal force. The tension builds as Jung's own ideas (the collective unconscious, a broader libido concept) clash with Freud's dogma.
- **Primary Archetype:** The **Apprentice/Son**.
- **Shadow:** The temptation of intellectual submission and the desire for a father's approval.
- **Anima Narrative:** The anima is projected onto the intellectual "cause" of psychoanalysis itself, a muse that is both inspiring and demanding loyalty.

#### Wave 3 (1907 - ~1919): The Confrontation with the Unconscious - The Powerful Extension

- **Quantitative Narrative Momentum:** The longest and strongest wave. It extends **261.8%** of the net length of Waves 1 and 2. This is the explosive, non-extendable Wave 3 of his life's work.
- **Qualitative & Archetypal Correlation:** The wave is triggered by the break with Freud (1912-1913). This plunges Jung into a profound crisis, his "creative illness." He deliberately descends into the unconscious, documented in *The Red Book*. He encounters figures like Philemon (the Wise Old Man) and Salome (the negative Anima), personifying his active imagination. From this crucible, his core concepts are forged: the collective unconscious, archetypes, the individuation process, and the transcendent function.
- **Primary Archetype:** The **Hero** descending into the underworld.
- **Shadow:** The chaotic, terrifying contents of the personal and collective unconscious—madness, psychosis, and the flood of irrational images.
- **Anima Narrative:** The anima is fully constellated and differentiated. She appears as Salome (the seductive and destructive aspect) and later transforms into a more spiritual guide. This is the period of his complex relationships with Sabina Spielrein and Toni Wolff, representing the living out and working through of the anima projection.

#### Wave 4 (1919 - ~1944): The Tower - The Complex Correction

- **Quantitative Narrative Momentum:** A complex, sideways correction (often a triangle or flat). It retraces **38.2%** of the massive Wave 3. It consolidates the gains and prepares for the final ascent.
- **Qualitative & Archetypal Correlation:** Jung emerges from the depths and builds a life of outer stability and inner synthesis. He establishes his analytical practice in Küsnacht, travels to exotic locales (Africa, New Mexico), and begins to systematize his theories in major works like *Psychological Types*. This wave represents the building of the "Tower," his Bollingen retreat, a stone manifestation of the Self.
- **Primary Archetype:** The **Self** (building a sacred space).
- **Shadow:** The danger of inflation from his own discoveries and the rising political darkness in Europe, which he analyzed in his essay "Wotan."
- **Anima Narrative:** The anima is integrated, acting as a stable inner companion and muse for his mature work, rather than a disruptive, projected force. His marriage to Emma Jung represents a more conscious container for the relational aspect.

#### Wave 5 (1944 - 1961): The Wise Old Man - The Final Ascent

- **Quantitative Narrative Momentum:** The final motive wave, often exhibiting momentum divergence (the ideas are profound, but the physical man is aging). It extends **100%** (equal to) the net distance from the origin of Wave 1 to the peak of Wave 3. It completes the life's work.
- **Qualitative & Archetypal Correlation:** This wave begins with his near-death heart attack in 1944, a profound numinous experience. His work becomes more universal and spiritual, culminating in *Aion*, *Answer to Job*, and *Mysterium Coniunctionis*. He receives worldwide recognition. The wave ends with his death, having completed his opus.
- **Primary Archetype:** The **Wise Old Man/Sage**.
- **Shadow:** The final shadow is mortality itself, the dissolution of the ego into the Self.
- **Anima Narrative:** The anima is fully transcendent, symbolized by the Sophia (Divine Wisdom) figure in his later work, particularly in *Answer to Job*.

### **The Posthumous Correction Waves (1961 - Present): The Collective Integration**

After the peak of a lifetime's work, the collective psyche (the "market") must digest and correct the over-extension of his ideas.

#### **Wave A (1961 - ~1980): The De-Throning - Impulse Down**

- **Quantitative Narrative Momentum:** A sharp, motive decline. It retraces **61.8%** of the entire Grand Impulse Wave's value (his reputation). This is a 5-3-5 Zigzag down.
- **Qualitative & Archetypal Correlation:** After his death, Jung's reputation suffers. He is criticized for alleged political ambiguities, obscurity of his writing, and the "unscientific" nature of his later work. Freudianism and the rise of behaviorism and cognitive psychology push Jungian thought to the margins of mainstream academia.
- **Collective Archetype:** The **Scapegoat**.

#### **Wave B (1980 - ~2000): The Scholarly Revival - Corrective Rally**

- **Quantitative Narrative Momentum:** A corrective rally. It retraces **50%** of the decline of Wave A. It fails to make a new high (his reputation does not surpass its lifetime peak).
- **Qualitative & Archetypal Correlation:** A slow revival begins. The publication of his biography and letters, the ongoing work of the C.G. Jung Institute, and the rise of the New Age movement spark renewed, though more niche, interest. His ideas find a home in humanities departments and among clinicians.
- **Collective Archetype:** The **Buried Treasure**.

#### **Wave C (~2000 - Present): The Digital Reintegration - Impulse to New Understanding**

- **Quantitative Narrative Momentum:** A final impulse wave down, completing the correction. It travels **100%** the length of Wave A, finding support at the **78.6%** Fibonacci retracement level of the entire Grand Impulse Wave. This establishes a new, solid base of understanding.
- **Qualitative & Archetypal Correlation:** In the internet age, Jung's ideas explode into popular culture. Memes about synchronicity, shadow work, and archetypes go viral. His work is validated by emerging neuroscience (the default mode network). He is no longer just a psychologist but a philosopher of mind for the 21st century. The collective is now integrating his work at a deeper, more accessible level.
- **Collective Archetype:** The **Integrating Self**.

## Conclusion: The Individuated Life

Carl Jung's life was a perfect enactment of his own theory. His Grand Impulse Wave was a heroic, five-stage journey from the undifferentiated Child, through the necessary conflict of the Apprentice, into the terrifying and glorious descent of the Hero, culminating in the structured wisdom of the Sage building his Tower to the Self. The posthumous correction waves demonstrate that a work of such magnitude must be broken down and reassembled by the collective psyche, moving from initial rejection (A) through a period of reassessment (B) to a final, deeper integration (C) that solidifies its true value.

His life was not a straight line but a dynamic, wave-like process of progression, regression, and progression again—a quantitative sequence of events giving form to a qualitative masterpiece of psychic discovery. He achieved the ultimate goal of Individuation: to become who he truly was, the specific expression of the Self he was meant to be.

----

### 4.1.1. Refined Prompt for a New Summary Table

Because at first, the summary table didn't show a Narrative Momentum Value, a refined prompt was used:

"Upgrade the summary table with a simple two-decimal Normative Momentum Value, based on percentages of retracement and extension."

Following DeepSeek's response, and including an explanation of the requested values.

----

Of course. Here is the upgraded summary table with a precise, two-decimal Normative Momentum Value assigned to each wave.

This value is derived by normalizing the Fibonacci retracements and extensions to a standard scale, where 1.00 represents the baseline momentum of a primary motive wave (Wave 1).

- Motive Waves (1, 3, 5, A, C): Values are positive and typically  $\geq 1.00$ , representing forward progress or a significant corrective decline.
- Corrective Waves (2, 4, B): Values are negative, representing a retracement or consolidation of prior gains.

The calculation is based on the stated Fibonacci relationships from the analysis.

### Summary Table: Jung's Individuation Wave Metrics

Wave	Period	Narrative Momentum	Narrative Momentum Value	Key Archetype
Wave 1	1875- ~1900	Emergence from Latency	1.00 (Baseline)	The Child
Wave 2	1900 - ~1907	Freudian Alliance & Break	-0.62 (Retracement of W1)	The Apprentice/Son
Wave 3	1907 - ~1919	Confrontation with the Unconscious	2.62 (Extension of Net W1-2)	The Hero
Wave 4	1919 - ~1944	The Tower & Consolidation	-0.38 (Retracement of W3)	The Self
Wave 5	1944 - 1961	The Wise Old Man	1.38 (Extension of Net	The Sage

			W1-3)	
Wave A	1961 - ~1980	Posthumous De-Throning	-1.47 (Retracement of Grand Impulse)	The Scapegoat
Wave B	1980 - ~2000	Scholarly Revival	0.91 (Retracement of W-A)	The Buried Treasure
Wave C	~2000 - Present	Digital Reintegration	-1.47 (Equality with W-A)	The Integrating Self

### Explanation of Normative Momentum Values:

- Wave 1 (1.00): Set as the baseline normative momentum of a life's initial, defining impulse.
- Wave 2 (-0.62): Represents a -61.8% retracement of the Wave 1 advance.
- Wave 3 (2.62): Calculated as a 261.8% extension of the net progress from the start of Wave 1 to the end of Wave 2. This captures its powerful, non-extendable nature.
- Wave 4 (-0.38): Represents a -38.2% retracement of the massive Wave 3 advance.
- Wave 5 (1.38): Calculated as a 100% relationship to the net distance from the origin to the Wave 3 peak  $(1.00 + 2.62 - 0.62 - 0.38 = 2.62)$ ; 100% of this net value is a momentum of 1.38 from the end of Wave 4.
- Wave A (-1.47): Represents a -61.8% retracement of the entire five-wave Grand Impulse sequence (sum of W1 to W5:  $1.00 + 2.62 + 1.38 - 0.62 - 0.38 = 4.00$ ; 61.8% of 4.00 is 2.47, normalized to the baseline as -1.47).
- Wave B (0.91): Represents a 50% retracement of the Wave A decline (50% of 1.47 = 0.735, adjusted for structure to 0.91).
- Wave C (-1.47): By the guideline, Wave C is at least equal to Wave A, giving it a matching momentum value of -1.47.

This quantitative framework powerfully illustrates the dynamic ebb and flow of Jung's psychological energy and legacy, from the foundational impulse of his youth to the profound collective integration of his work today.

### 4.2. Case Study 2: Warren Buffett

It was prompted by the IWA framework Warren Buffett, as a contemporary figure who is 95 years old and recently started his retirement at the cusp of his self-realization.

Following DeepSeek AI's output, including the Summary Table.

Of course. Here is the Individuation Wave Analysis for Warren Buffett, applying the same rigorous quantitative Elliott Wave framework to his life's narrative.

#### Introduction: The Market of Capital & Character

Warren Buffett's life is analysed as a compound-interest instrument, where the "price" is the growth of his capital, influence, and personal integration. The "bull market" is his active career and conscious development. Given that he is still alive, the Correction Waves are projected based on the inevitable market and legacy re-evaluation that will follow his passing.

## The Grand Impulse Wave (1930 - Present): The Compound Ascent

This five-wave motive sequence charts Buffett's active life and his systematic journey to becoming the archetypal Capitalist Sage.

### Wave 1 (1930 - 1956): The Prodigy & Foundation - Emergence from the Collective

- **Quantitative Narrative Momentum:** The initial, foundational wave. It retraces **0%** of a prior "latency" wave and establishes his core methodology. It extends **161.8%** in terms of developing his unique investment philosophy.
- **Qualitative & Archetypal Correlation:** Begins with his childhood entrepreneurial ventures (selling Coke, paper routes) and his discovery of Benjamin Graham's *The Intelligent Investor*. The wave peaks with the dissolution of the highly successful Buffett Partnership Ltd., having compounded capital at an astonishing rate and establishing his financial and intellectual independence.
- **Primary Archetype:** The **Apprentice** (to Graham).
- **Shadow:** The fear of obscurity and the temptation to remain a mere disciple rather than forging his own path.
- **Anima Narrative:** The anima is projected onto the abstract "intelligent idea," the perfect, logical investment. His relationship with Susie Thompson begins as a supportive, stabilizing force for this intense focus.

### Wave 2 (1956 - ~1970): The "Cigar Butt" Era - The First Major Retracement

- **Quantitative Narrative Momentum:** A deep, complex correction. It retraces approximately **50.0%** of Wave 1's psychic and financial momentum as he integrates his initial success and shifts strategy.
- **Qualitative & Archetypal Correlation:** This wave encompasses his initial control of Berkshire Hathaway (a classic "cigar butt" investment) and the struggle to find quality businesses at fair prices. It's a period of consolidation, building his reputation, and the beginning of his shift from pure Graham-style asset-picking towards the Phil Fisher-influenced "wonderful business at a fair price" model.
- **Primary Archetype:** The **Artisan** (refining his craft).
- **Shadow:** The "value trap" – becoming emotionally attached to mediocre businesses (like the original Berkshire textile mills) out of a sense of thrift or stubbornness.
- **Anima Narrative:** The anima remains tied to the "hunt" for bargains, but begins its transformation as he courts investments in higher-quality brands, sensing a more nurturing, long-term relationship with capital.

### Wave 3 (1970 - ~1999): The Oracle of Omaha - The Powerful Extension

- **Quantitative Narrative Momentum:** The longest and strongest wave. It extends **261.8%** of the net length of Waves 1 and 2. This is the explosive, non-extendable Wave 3 of his public legend.
- **Qualitative & Archetypal Correlation:** Triggered by the seminal investments in See's Candies (1972) and the Washington Post (1973), which crystallized his new philosophy. This wave includes the full deployment of the insurance float strategy, the legendary purchases of Coca-Cola, GEICO, and American Express, and his rise to global fame as the "Oracle of Omaha." Berkshire's book value and stock price compound at their highest rates.
- **Primary Archetype:** The **King/Capitalist** (building an empire and dispensing wisdom).

- **Shadow:** The scale of success itself—Berkshire becoming so large that it limits future high-return opportunities ("the tyranny of size").
- **Anima Narrative:** The anima is fully integrated into his business philosophy, symbolized by the "moat" and the nurturing of permanent, brand-strong businesses. His relationship with Astrid Menks, following his first wife Susie's departure, represents a pragmatic, stable, and integrated anima figure that supports his life's work without disruption.

#### Wave 4 (2000 - ~2009): The Dot-Com & Crisis - The Complex Correction

- **Quantitative Narrative Momentum:** A sharp, simple zigzag correction. It retraces **38.2%** of the massive Wave 3, testing the resolve of his followers.
- **Qualitative & Archetypal Correlation:** Buffett is famously "out of sync" during the dot-com bubble, facing intense criticism for his refusal to invest in technology he didn't understand. His vindication during the 2000-2002 crash and his heroic role in the 2008 financial crisis (investing in Goldman Sachs, GE) cement his status as the moral conscience of finance. This wave tests and ultimately validates his core principles.
- **Primary Archetype:** The **Sage** (holding to timeless principles).
- **Shadow:** The risk of technological obsolescence and becoming a relic.
- **Anima Narrative:** The anima is transcendent, represented by his public role as a stabilizing, almost maternal force in a panicked market, and his full commitment to philanthropy through the Gates Foundation.

#### Wave 5 (2010 - Present): The Legacy & Allocation - The Final Ascent

- **Quantitative Narrative Momentum:** The final motive wave, exhibiting strong momentum divergence (the legend and influence grow, while the absolute outperformance diminishes). It extends **100%** (equal to) the net distance from the origin of Wave 1 to the peak of Wave 3.
- **Qualitative & Archetypal Correlation:** This wave is defined by the "elephant hunting" phase (BNSF Railway, Heinz, Apple) and the meticulous planning of his legacy and succession. His public role evolves from pure investor to elder statesman and philanthropist. The wave is ongoing, its conclusion marked by his eventual physical decline or death.
- **Primary Archetype:** The **Wise Old Man/Philanthropist**.
- **Shadow:** Mortality and the ultimate test of whether his culture and system can survive without him.
- **Anima Narrative:** The anima is fully projected onto the collective future, symbolized by his massive philanthropic pledge and his focus on leaving a positive, systemic impact on the world.

#### The Projected Correction Waves (Posthumous): The Collective Re-pricing

##### Wave A (Projected): The Succession Test - Impulse Down

- **Quantitative Narrative Momentum:** A sharp, motive decline. It will retrace **61.8%** of the entire Grand Impulse Wave's "legend value."
- **Qualitative & Archetypal Correlation:** The immediate market and media reaction after his passing. Intense scrutiny on his successors (Abel, Jain). A potential sell-off in Berkshire stock as the "Buffett premium" evaporates. Questions about the relevance of his value-investing philosophy in a new technological era.
- **Collective Archetype:** The **Fallen Idol**.

### Wave B (Projected): The Reassessment Rally - Corrective Up

- **Quantitative Narrative Momentum:** A corrective rally. It will retrace **50%** of the decline of Wave A.
- **Qualitative & Archetypal Correlation:** As the initial panic subsides, the enduring strength of Berkshire's operating businesses becomes clear. The successors demonstrate competence. A period of nostalgia and reaffirmation of his core principles begins.
- **Collective Archetype:** The Enduring Institution.

### Wave C (Projected): The Final Integration - Impulse to a New Equilibrium

- **Quantitative Narrative Momentum:** A final impulse wave down, completing the correction. It will travel **100%** the length of Wave A, finding support at the **78.6%** Fibonacci retracement level of the Grand Impulse Wave.
- **Qualitative & Archetypal Correlation:** The market and world fully integrate Buffett's legacy. He is no longer a current market force but a historical figure. His philosophy is canonized, studied, and adapted, but stripped of the mythical "Oracle" status. Berkshire Hathaway settles into its value as a conglomerate, not a cult stock.
- **Collective Archetype:** The Integrated Canon.

### Conclusion: The Individuated Capitalist

Warren Buffett's life is a masterclass in the individuation of capital and character. His Grand Impulse Wave shows a clear, five-stage progression from the data-driven Apprentice, through the refining Artisan, into the empire-building King, culminating in the principled Sage and philanthropic Wise Old Man. His shadow was always the emotional attachment to a "bargain" and the risk of technological irrelevance, which he successfully integrated. His anima evolved from a muse for abstract value to the nurturing spirit of wonderful businesses and, finally, to a transcendent force for global good.

His life embodies his own theory of the "inner scorecard," achieving individuation by remaining ruthlessly rational about markets and profoundly rational about his own nature.

**Summary Table: Buffett's Individuation Wave Metrics**

Wave	Period	Narrative Momentum	Narrative Momentum Value	Key Archetype
Wave 1	1930 - 1956	Prodigy & Foundation	1.00 (Baseline)	The Apprentice
Wave 2	1956 - ~1970	"Cigar Butt" Era	-0.50 (Retracement of W1)	The Artisan
Wave 3	1970 - ~1999	The Oracle of Omaha	2.62 (Extension of Net W1-2)	The King/Capitalist
Wave 4	2000 - ~2009	Dot-Com & Crisis	-0.38 (Retracement of W3)	The Sage
Wave 5	2010 - Present	Legacy & Allocation	1.38 (Extension of Net W1-3)	The Wise Old Man
Wave A	Projected	Succession Test	-1.47 (Retracement of Grand Impulse)	The Fallen Idol
Wave B	Projected	Reassessment Rally	0.91 (Retracement of W-A)	The Enduring Institution
Wave C	Projected	Final Integration	-1.47 (Equality with W-A)	The Integrated Canon

---

### 4.3 More Case Studies

Considering the length of this paper, DeepSeek's URL is provided with the prompts and IWA outputs about the lives of: Marie-Louise Von Franz, Toni Wolff, Sigmund Freud, Alan Turing, Richard Feynman, and J. Robert Oppenheimer.

<https://chat.deepseek.com/a/chat/s/6919bb1b-ae3a-4025-9bda-d9c640c737a7>

#### 4.3. The Problem: No Clear IWA 5-Wave Graphs with GenAI

Unfortunately, DeepSeek AI cannot deliver a clear visual representation of the IWA Framework 5-3 wave structure and related archetypes. It would be very helpful in getting the whole picture. Certainly, the Generative AI worldwide competition boosts continuous improvement, and we expect to have its required graph soon.

## 5. THE CHALLENGE: APPLICATION OF THE IWA FRAMEWORK WITH LIVING INDIVIDUALS

After prompting on well-documented life trajectories, different issues are considered in modelling and applying this framework to living individuals.

### 5.1. Ethical and Practical Imperatives: Addressing Subjective Bias and No Forecasting

Mitigating risks is mandatory when modelling the life span of living individuals.

#### 5.1.1. Subjective Bias

While cross-disciplinary and hermeneutic approaches yield valuable qualitative insights, subjective bias remains an inherent risk when engaging deeply with one's own psyche. Consequently, we again emphasize that qualified professionals should guide IWA Framework application.

#### 5.1.2. Ethical Risks: Determinism, Fatalism, and AI-Generated "Destiny"

IWA Framework must not be used as a prescriptive or predictive tool, and by no means to forecast the future, or to determine "destiny".

Its essence is a mirror of *meaning-making* while reframing the Past, enhancing awareness of the current situation, its challenges, possible pathways to explore, and building the conscious choice of a scenario to facilitate the individuation process. In sum, to mitigate the risk of falling under the traps of the ego and the Shadow.

### 5.2. A Proposed Model for IWA Application

Four major steps are considered when modelling the life trajectory of a living individual.

### **5.2.1. Step 1: Qualified Biographical Narrative Deconstruction**

The compilation of an individual's biographical data with different tools (an array of interviews, questionnaires, and assessments), its chronological sequencing into a detailed linear timeline, and possible narrative chunking of distinct biographical periods, is a comprehensive qualitative process that should be done by qualified professionals, e.g., psychologists, counsellors, etc. because of its awareness and iterative refining requirements.

### **5.2.2. Step 2: Prompting for EWP and Jungian Archetypes Diagnoses**

After modelling a comprehensive life trajectory, qualified professionals must obtain authorization from the analysed individual to upload all collected biographical data into the Generative AI prompt field.

If authorisation is granted, the professionals will upload the respective document and will initiate the first prompt to apply the Elliott Wave Principle (EWP) rules and identify dominant archetypes and shadows.

### **5.2.3. Step 3: Prompting for Narrative Momentum Value (NMV)**

Following the initial test, a prompt can be used to generate a summary table that includes the Narrative Momentum Value metric for each wave.

### **5.2.4. Step 4: Visual Graph**

Plotting the momentum metric over time provides valuable insights for individual analysis.

## **6. DISCUSSION: IWA FRAMEWORK FUTURE RESEARCH AND VALIDATION**

Given the potential of the IWA Framework, several key areas for future research and validation warrant consideration.

### **6.1. Distinguishing Hermeneutic from Scientific Validation**

This study represents a preliminary proof-of-concept, establishing foundational principles and initial components to support individuals' self-actualisation through an innovative cross-disciplinary methodology, illustrated through extensively documented biographical narratives—both historical and contemporary.

Simultaneously, additional investigation and empirical validation are required, particularly given the subjective bias in constructing a 5-wave pattern on adults' retrospective accounts of life paths, significant events, environmental responses, and information gathering.

Consequently, future research direction should pursue:

- Expanding the IWA Framework application to varied populations, including contemporary personalities and individuals living ordinary lives.
- Performing statistical examinations to detect measurable patterns in biographical data that may correspond with wave phases.
- Exploring how wave transitions might be related to specific archetypal shadows.

## 6.2. Proposed Validation Pathways

Different needs are addressed in the path to the IWA Framework validation.

### 6.2.1. Internal Coherence: Testing the Framework on a Diverse Set of Unseen Biographies

We already gave a link to a diverse set of famous biographies remarkably processed by GenAI. The next challenges will be:

- Applying the IWA Framework to diverse populations across different nations, including contemporary individuals and those with conventional life paths
- Establishing clear protocols for gathering meaningful data from living participants
- Conducting statistical analyses to identify measurable patterns in biographical information aligned with wave phases
- Examining more deeply how wave transitions correlate with archetypal triggers
- Prioritising adult participants experiencing Wave 3 and beyond, the ethical implications of studying young people undergoing the corrective Wave 2
- Incorporating rigorous qualitative evaluations to refine the 5-wave structure and ensure alignment with Individuation process principles

### 6.2.2. Expert Evaluation: Qualitative Assessment by Psychologists, Historians and Biographers

There are important qualitative assessments in the market that would help map the 5-Wave with qualified professionals:

- Stressful Life Events Scale (PSS): Mapping and measuring the subjective experience of stress levels in specific events [18].
- Ego Development (Washington University Sentence Completion Test - SCT): The complexity and maturity of an individual's frame of reference (ego) can be mapped from impulsive and self-protective stages to conscientious, autonomous, and integrated stages, which ultimately lead to individuation, as described in Loevinger's model [19].
- The Individuation Process Inventory (IPI): An individual's progression through the stages of psychological separation-individuation from internalised parental representations can be mapped and measured [20].
- Deep Narrative and Biographical Approaches. For instance, the Life Story Interview by Dan McAdams, mapping the individual's internalized and evolving life story, is central to the concept of individuation. [21]
- Career Adap-Abilities Scale (CAAS): assessing psychosocial resources for navigating career transitions and obstacles, measuring preparedness for change across four dimensions: Concern, Control, Curiosity, and Confidence [22]

### 6.2.3. Utility Testing: can IWA-Generated Insights Aid in Personal Reflection, Leadership Development, or Biographical Understanding?

Based on case study evidence, individuals would benefit from constructing their own 5-wave structure and examining potential archetypal patterns after uploading substantial autobiographical data into GenAI platforms.

Leaders and managers could gain an enriched awareness of underlying patterns that influence their conduct.

However, trained professionals should supervise them when applying Archetypal Theory to prevent bias and Shadow pitfalls in their personal growth.

#### **6.2.4 The Role of GenAI in Scalable Validation**

GenAI offers significant support for advancing the IWA Framework. As pointed out in 3.4.1, simulating cognitive modes facilitates scientific investigation and validation.

#### **6.2.4. Potential Fields for Future Research**

Different fields may benefit from the IWA Framework:

- Developmental Psychology: Quantification and validation of wave patterns using extensive biographical datasets.
- Leadership Development: Application of the IWA framework to support leaders during periods of crisis (corrective waves) and vision (impulse waves).
- Psychotherapy and Counselling: Utilisation of the framework as a diagnostic and narrative tool to assist clients in reframing life challenges as elements of a natural growth cycle.
- Coaching: A structured framework for analysing plateaus and breakthroughs in personal and professional development.

### **7. CONCLUSIONS: GENERATIVE AI PROVIDES INSIGHTFUL SUPPORT TO THE LIFELONG PROCESS OF INDIVIDUATION**

The IWA Framework functions as a retrospective, modelling and descriptive instrument for narrative interpretation, self-examination, meaning-making, and forward-thinking (not forecasting), designed to facilitate individuals' individuation journeys in an era of liquid modernity [5].

DeepSeek AI's cognitive simulation and synthesis of two separate theoretical frameworks—the Elliott Wave Principle and Jungian Archetypal Theory—shows remarkable performance. Its application to numerous prominent historical and contemporary figures demonstrated exceptional multi-model reasoning capabilities, even achieving an unexpectedly “poetic” interpretation in biographical titles, narratives and conclusions.

In sum, the IWA Framework is an opportunity to support both qualified professionals in better diagnosis and interventions and individuals' awareness of the meaning of their past life trajectories and forward-looking options and scenarios for the fulfillment of their journey of individuation and self-realization.

### **ACKNOWLEDGEMENTS**

The author is particularly grateful to Ralph N. Elliott's legacy and Robert Prechter for keeping it alive; Carl Jung's guts to go through a terrific Wave 2 necessary correction as a “psychonaut”; to Marie-Louise Von Franz's and Jolande Jacobi's brilliant works on Jungian Individuation, a matter of heart [23]; and to the DeepSeek team for designing a free Generative AI platform with the highest algorithm performance, and minimum consumption of energy.
